# M101A | Magnet Field Generator

Magnetic field generator for sanitary conduits
Produces magnetic alternating fields, which charge the trace elements such as lime, metal oxides, etc. contained in water positively molecular. So it can be prevented that these cannot dock to molecules that are also charged positively (e.g. pipes). Thus the deposit of lime, minerals, etc. in pipes, valves, etc. is made difficult or prevented, respectively.
Required plug power supply: 6 - 15 V/DC with jack plug 3,5 mm, < 130 mA (not enclosed).

4024028031118

For indoor use only

Dimensions:  approx. 76 x 56 x 28 mm (without fastening straps)

# M102A | Second battery charger 6 - 24 V/DC

For lead accumulators 6 to 24 V. With this accumulator separating filter 2 accumulators are charged separately at one source of charging current (vehicle generator, solar systems, windmills, chargers etc). For charging currents up to 10 A at maximum (with cooling 20 A). The charging current distributes in such a manner that an empty battery will be charged more than an battery that is almost charged. It is perfect for motor caravans if one battery operates the television, radio etc. and the second battery must remain charged in order to start the motor. Or for weekend cottages if one battery used for the alarm system must not be emptied. A compensating current of approx. 0.005 A may flow between both accumulators (during normal operation at 12 V). This serves the purpose to enable a solar regulator, which is possibly connected in series the possibly necessary voltage control.

**Technical Data:**
Batteries to be connected:  2 each of the same voltage 6 - 24 V/DC
Max. charging current:  10 A, with cooling 20 A at maximum (total current)
Dimensions:  approx. 87 x 60 x 33 mm (without fixingstraps)

# M152 | Rain Sensor 12 V/DC

If the sensor plate gets into contact with rain or slushy snow / hail, it switches on a relay. Sun blinds may be retracted with that, skylights may be closed or a simple rain alarm can be given. The automatically heated surface of the sensor prevents any freezing or wetting of the sensor surface. 2 installed LEDs indicate the function. Waterproof-encapsulated electronics. Note: The electronics of the rain sensor reacts to the electrical conductivity of the water. We have now ascertained that there are areas where rainwater falls, which is absolutely clean (distilled water). The sensor does not react to this. The water must be at least slightly contaminated (fractions of dust, smoke, etc.) so that the water is electroconductive and triggers the sensor. In Germany the rainwater is conductive in 99% of the areas. If the sensor does not trigger in your case, you should install it in such a manner that the rainwater runs at first over a small porch roof or the like before the water touches the sensor. If the water falls directly from the cloud on the sensor in its purest form and does not trigger it, it will be sufficient if it runs over a small board or from a porch roof on the sensor. Then the water will have absorbed enough impurifications that it will be electroconductive and triggers the sensor. Of course, the sensor has to be built it slantwise so that the water runs down again.

# M152K | Rain Sensor, Capacitive

A relay connects if the completely insulated sensor plate gets wet (e.g. raindrops). In contrast to rain detectors with a metallic sensor, this sensor functions capacitively. # M167N | Level Indicator for Water Tanks

Remote Sensing up to 100 m
Battery-powered level indicator for measuring the liquid level of water tanks such as rainwater, sewage chambers or slurry tanks from a distance of up to 100 m. After touching the button, indication occurs via 10 LEDs in steps of 10% each (indication 10 - 100%). The device is earmarked for wall assembly (approx. 131 x 78 x 36 mm) and requires 2 batteries „AA“. Connection is made via terminals inside the device. A normal signal cable (telephone cable, control wire or the like) with at least 11 cores is necessary to connect your water tank with the level indicator (cable is not included). You may also employ cables with less cores, but then it will not be possible to use all indication steps (e.g. with 8 cores only 7 LED indication steps may be used, which is, however, often sufficient).
Extension in case of bigger measurements
This module is normally to be used for measuring water levels in rain containers, water containers, etc. Our clients have asked us if the module can be used to measure bigger containers like for example a dwell, where the separation of the measurement electrodes is of approx. 5 m. Due to the big separation between the higher and the lower electrode in this kind of measurements (approx. 40 m), the intensity of the measurement display (LED´s) can become weak. In order to avoid this, we recommend installing the electrodes with a parallel long tube for all of the electrodes (See picture).

# L001 | Piezo spherical dome tweeter with flare

This high-quality piezo-spherical cap-tweeter can be connected directly at the amplifier or at a diplexer. This tweeter has a vaulted aluminium spherical cap and no conical membrane (as usual with flare loudspeakers). Due to the aluminium spherical cap the acoustic pressure is not so strong as with comparable other piezo-tweeters. In return the loudspeaker has a very broad angle of radiation and a very good brilliant sound. Due to the aluminium spherical cap with its special radius of gyration and very low mobile mass the frequency response is very clean up to 45000 Hz. Therefore this tweeter is especially suitable as ultrasonic loudspeaker for the control of parasites (against rodents, vermins etc.).

**Technical Data:**
Frequency Range: approx. 2500 - 45000 Hz
Dimensions: approx. 65 x 145 mm, height: approx. 40 mm

An LED lights up if a body approaches the ultrasonic sensors at a distance of 10 - 80 cm (depending on the size of the body). Use: parking-in assistance for cars in garages, alarm signal for persons or animals staying in a certain area. Operating voltage: 9 - 12 V/DC. The device works according to the same principle as the ultrasonic echo ranging of bats!
This kit may be extended to relay operation with our relay board "B197" (not enclosed).
Please notice the article "Peilen wie die Fledermaus" from the german magazine "Electronic Actuell Magazin" no.7/99.

Lucky bag with different LED types This bag contains standard-LEDs of different colours and form. All LEDs run with a current of 10 mA or less. Each LED has to be set into operation by using a series resistor, which limits-according to the operating voltage- the current to 10 mA or less. The LEDs can only be used with direct voltage.
The LEDs have different operating voltages, according to their colour.

Tip:
Before the first application remove existing marten scent with our Z101 - Scent marks remover or a thorough engine wash.

Content: 500 ml concentrate corresponds to approximately 1.3 liters of non-concentrated liquid.

**Technical Data:**
• Use the Spray safely. Before use always read label and product information.
• Keep locked up and out of the reach of children.
• Avoid contact with eyes and skin.
• Active ingredient: 1.5 g / l geraniol.
May cause allergic reactions.
BAuA No.: 47927
Use biocides safely. Always read the label and product information before use.

# Z101 | Scent marks remover

FOR THE RELIABLE REMOVAL OF MARTEN SCENT MARKS IN THE ENGINE COMPARTMENT APPLY BEFORE THE USE OF MARTEN REPELLENT PRODUCTS WITHOUT THE INITIAL REMOVAL OF SCENT MARKS, THE MARTEN FEELS PROVOKED AND DEFENDS HIS TERRITORY. NOT AN ENGINE CLEANER. ESPECIALLY FOR SCENT MARKS.

Application: Apply only when engine / engine compartment is cool!
• Spray the Scent Marks Remover inside the engine compartment including the hood and fenders.
• Wait approx. 2-3 minutes, and then rinse with water. Do not rinse with high pressure washer.

Ingredients:

# Z115 | "Ground"-Mat for electroshock devices

Against martens and rodents in vehicles and buildings In vehicles:
This is an accessory for contact plate-electroshock devices, which are used against martens in vehicles. The martens that enter into the engine department do only get an electric shock upon touching the high-voltage contact plates if they touch the vehicle mass (chassis) with the paws at the same time. But nowadays there are cars that are largely laid out with plastic linings. In such cases the marten's contact with the high-voltage contact plates is without effect as the simultaneous contact with the vehicle mass (chassis) is missing. In this case it is necessary that this self-adhesive “ground” mat is affixed close to the high-voltage contact plates so that the marten will touch this with the paws at the same when it bites into the high-voltage contact plates. A cable is affixed to the “ground” mat, which has to be electrically connected to the nearest ground point of the vehicle.
The “ground” mat must not be exposed to temperatures above 60°C.
On lofts:
This “ground” mat may also be mounted inside at the entrance holes, e.g. on lofts, in order to chase away the martens out of the house. In this case the mat has to be affixed at the bottom of the entrance hole on the floor, the high-voltage contact plates have to be mounted at the marten's eye level directly vis-a-vis and the cable of the “ground” mat is to be connected with the ground connection (negative pole of the battery) of the high-voltage marten defence. If the marten now wants to slip through its entrance hole into the loft, it will then unevitably touch the “ground” mat with the paws and one high-voltage contact plate with the snout or forepaws. If the marten then gets an electric shock, it will escape.
It is recommendable to chase away the marten with strong ultrasonic devices in addition (> 20 kHz, > 100 dB).
