## M069N - Underground mole \& vole repeller

This waterproof module emits in rapid intervals aggressive seismic oscillations, which are widely radiated underground and are mostly avoided by root voles, moles and similar rodents. The module has to be digged near the animal tunnels and is operated through a cable with operating voltage of $9 \mathrm{~V} / \mathrm{DC}$. One module will be enough for approx. $1.000 \mathrm{~m}^{2}$ of garden.
